List of Accredited Further Learning Schemes for Chartered Engineer

The following schemes provide Further Learning for a Chartered Engineer for holders of a partial CEng accredited first degree (see separate JBM listing for a list of accredited first degrees).

Those MScs which have been designated 'technical' are also suitable for holders of an IEng accredited first degree, to meet the educational base for a Chartered Engineer but will still need to be verified by the appropriate Individual Case Committee. Technical MScs are denoted by the letter 'T' after the title (although currently not all MScs have been designated either way).

Those MScs which have been designated 'non-technical' are accredited for as meeting the Further Learning requirements for a Chartered Engineer (CEng) for candidates who have already acquired a partial CEng accredited BEng (Hons) undergraduate first degree.

Graduates with a non-accredited degree that enrol to take an accredited MSc who wish to know if their package of qualifications (bachelor plus masters) will satisfy the educational base for a Chartered Engineer must have their qualifications verified by one of the Individual Case Committee of the JBM member Institutions.
