## List of Accredited Further Learning Schemes for Chartered Engineer

The programmes listed below have been accredited by the Joint Board of Moderators (JBM) comprising of the Institution of Civil Engineers, the Institution of Structural Engineers, the Chartered Institution of Highways and Transportation, the Institute of Highway Engineers and the Permanent Way Institution on behalf of the Engineering Council as meeting the academic requirements for Further Learning for registration as a Chartered Engineer (CEng). To hold accredited qualifications for CEng registration, candidates must also hold a Bachelor (Hons) degree that has been accredited as partially meeting the academic requirement for registration as a Chartered Engineer (CEng).

When choosing a course, it is important to note that JBM and Engineering Council recognise two levels of accredited Bachelors degrees:

- 1. Accredited as partially meeting the academic requirement for CEng registration**  
i.e. Bachelors (Honours) degrees accredited as partially meeting the academic requirement for registration as a Chartered Engineer (CEng). Graduates from these programmes will need to demonstrate 8 additional AHEP Learning Outcomes<sup>1</sup> to demonstrate the required underpinning knowledge and understanding for registration as a Chartered Engineer (CEng).
- 2. Accredited for meeting the academic requirement IEng registration**  
i.e. Bachelors degrees and Bachelors (Honours) degrees accredited as fully meeting the academic requirement for registration as an Incorporated Engineer (IEng), without any additional recognition towards CEng educational requirements. Graduates from these programmes need to demonstrate 18 additional AHEP Learning Outcomes to demonstrate the required underpinning knowledge and understanding for registration as a Chartered Engineer (CEng).

All the courses listed below meet the CEng educational requirements if combined with the first type of Bachelors degree - i.e. a Bachelor (Honours) degree<sup>2</sup> accredited as partially meeting the academic requirement for CEng registration.

In addition, MScs which have been designated 'technical' or 'type I' in the table below may meet the CEng educational requirements if combined with the second type of Bachelors degree - i.e. a degree accredited as meeting the academic requirement for IEng registration. However, the graduate will need to have their package of qualifications verified by the appropriate Individual Case Committee of the JBM member institutions to ensure the combination of learning outcomes across both courses is complete. Technical MScs are denoted by the letter 'T' after the title<sup>3</sup>.

Graduates with a non-accredited degree who enrol on an accredited MSc must have their qualifications verified by one of the Individual Case Committee of the JBM member Institutions if they wish to know whether their package of qualifications (bachelor plus masters) will satisfy the academic requirements for CEng registration.

---

<sup>1</sup> Engineering Council's Accreditation of Higher Education Programmes (AHEP) handbook, version 4. See <https://www.engc.org.uk/ahep.aspx>.

<sup>2</sup> See separate JBM listing for a list of accredited first degrees.

<sup>3</sup> Some courses are designated as non-technical (NT) and type II for JBM's own internal reference.

| <b>Educational Establishment &amp; intake year(s)</b> | <b>Course Title</b>                            | <b>Course Length</b> | <b>Mode</b> |
